

NetSuite's journey started in 1998 when it used to be a web-based Accounting Software and was called Net ledger. As we start 2019, Netsuite is still web based with Solid Accounting Features but it has grown into a full-fledged ERP system that can easily give popular ERP systems like SAP B1 and Dynamics NAV a tough competition.

NetSuite is a journey and not a destination. Every six months, NetSuite releases new features and functionality that automatically gets to their users at no additional cost. NetSuite provides support in addition to maintenance.

It's support is unlimited in its usage, accessible from anywhere, and available 24*7. As an important fact, it is not incrementally priced on a per-user basis.

So, when do you feel is the right time to try on all this???

1. If you were a small business in the recent past but you seem to have outgrown software like Tally due to your business expanding to new locations or your Inventory SKU continuously growing. NetSuite facilitates real-time access to a mammoth financial figure, reducing paperwork by pulling from a single source of data. This allows one-click sales order and compact the processes between order and payment. Data entry costs and errors are considerably less since information might be inter-related and shared.
2. If your Organization runs every day complicated processes such as revenue recognition processes Netsuite's agile, cloud-based systems can be extremely helpful.

3. If you need a bird's eye view of your business and want users to have access to business-specific data at fingertips and offer executives insight into all aspects of the business. Netsuite's tailor-made dashboards are exactly what you should be eyeing.
4. Netsuite's cloud-based architecture is also ideal due to its scalability. This unique ability to add systems and functions as needed enables rapid growth, giving your organization a generation next foundation of technology to build off of in their new chapter. The combination of easy implementation, top-tier functionality, and rapid scalability should make Netsuite the preferred choice for any organization, who left behind the world of Tally for a modern, cloud-based solution.
5. In addition to time and monetary savings, if you are looking for a strong web-based accounting and management tool that allows for any-time, any-where decision making. Cloud-based storage choices facilitate the protection of company information, particularly in cases of natural disasters or employee aided sabotages which may drastically scale back recovery times.
6. NetSuite fetches data from sales, shipping, client service, marketing and other departments to quantitative numbers, which permits accounting and business planning to label processes and products with time and costs.
7. Accounting software is designed to handle the assets, liabilities and liquidity of a single entity. If you are looking to introduce a different structure, locations, entities or different currencies, you will have a problem. While functionalities enable multiple entities, consolidating the financial activities require manual efforts that incur errors and inefficiency. Calculating tax in different currencies involves time-consuming manual processes. "Netsuite is a solution to all these problems.

Always remember there are two kinds of people: "One who is already in the cloud and the ones who will be in the cloud" [CSA Consultants](#) started out as Tally Distributor in 2005 and has taken the leap to Cloud ERP with Netsuite after passing thru journey of more than a decade implementing various Tier I Global solutions.
